

# Arthro-MRI of the Hip

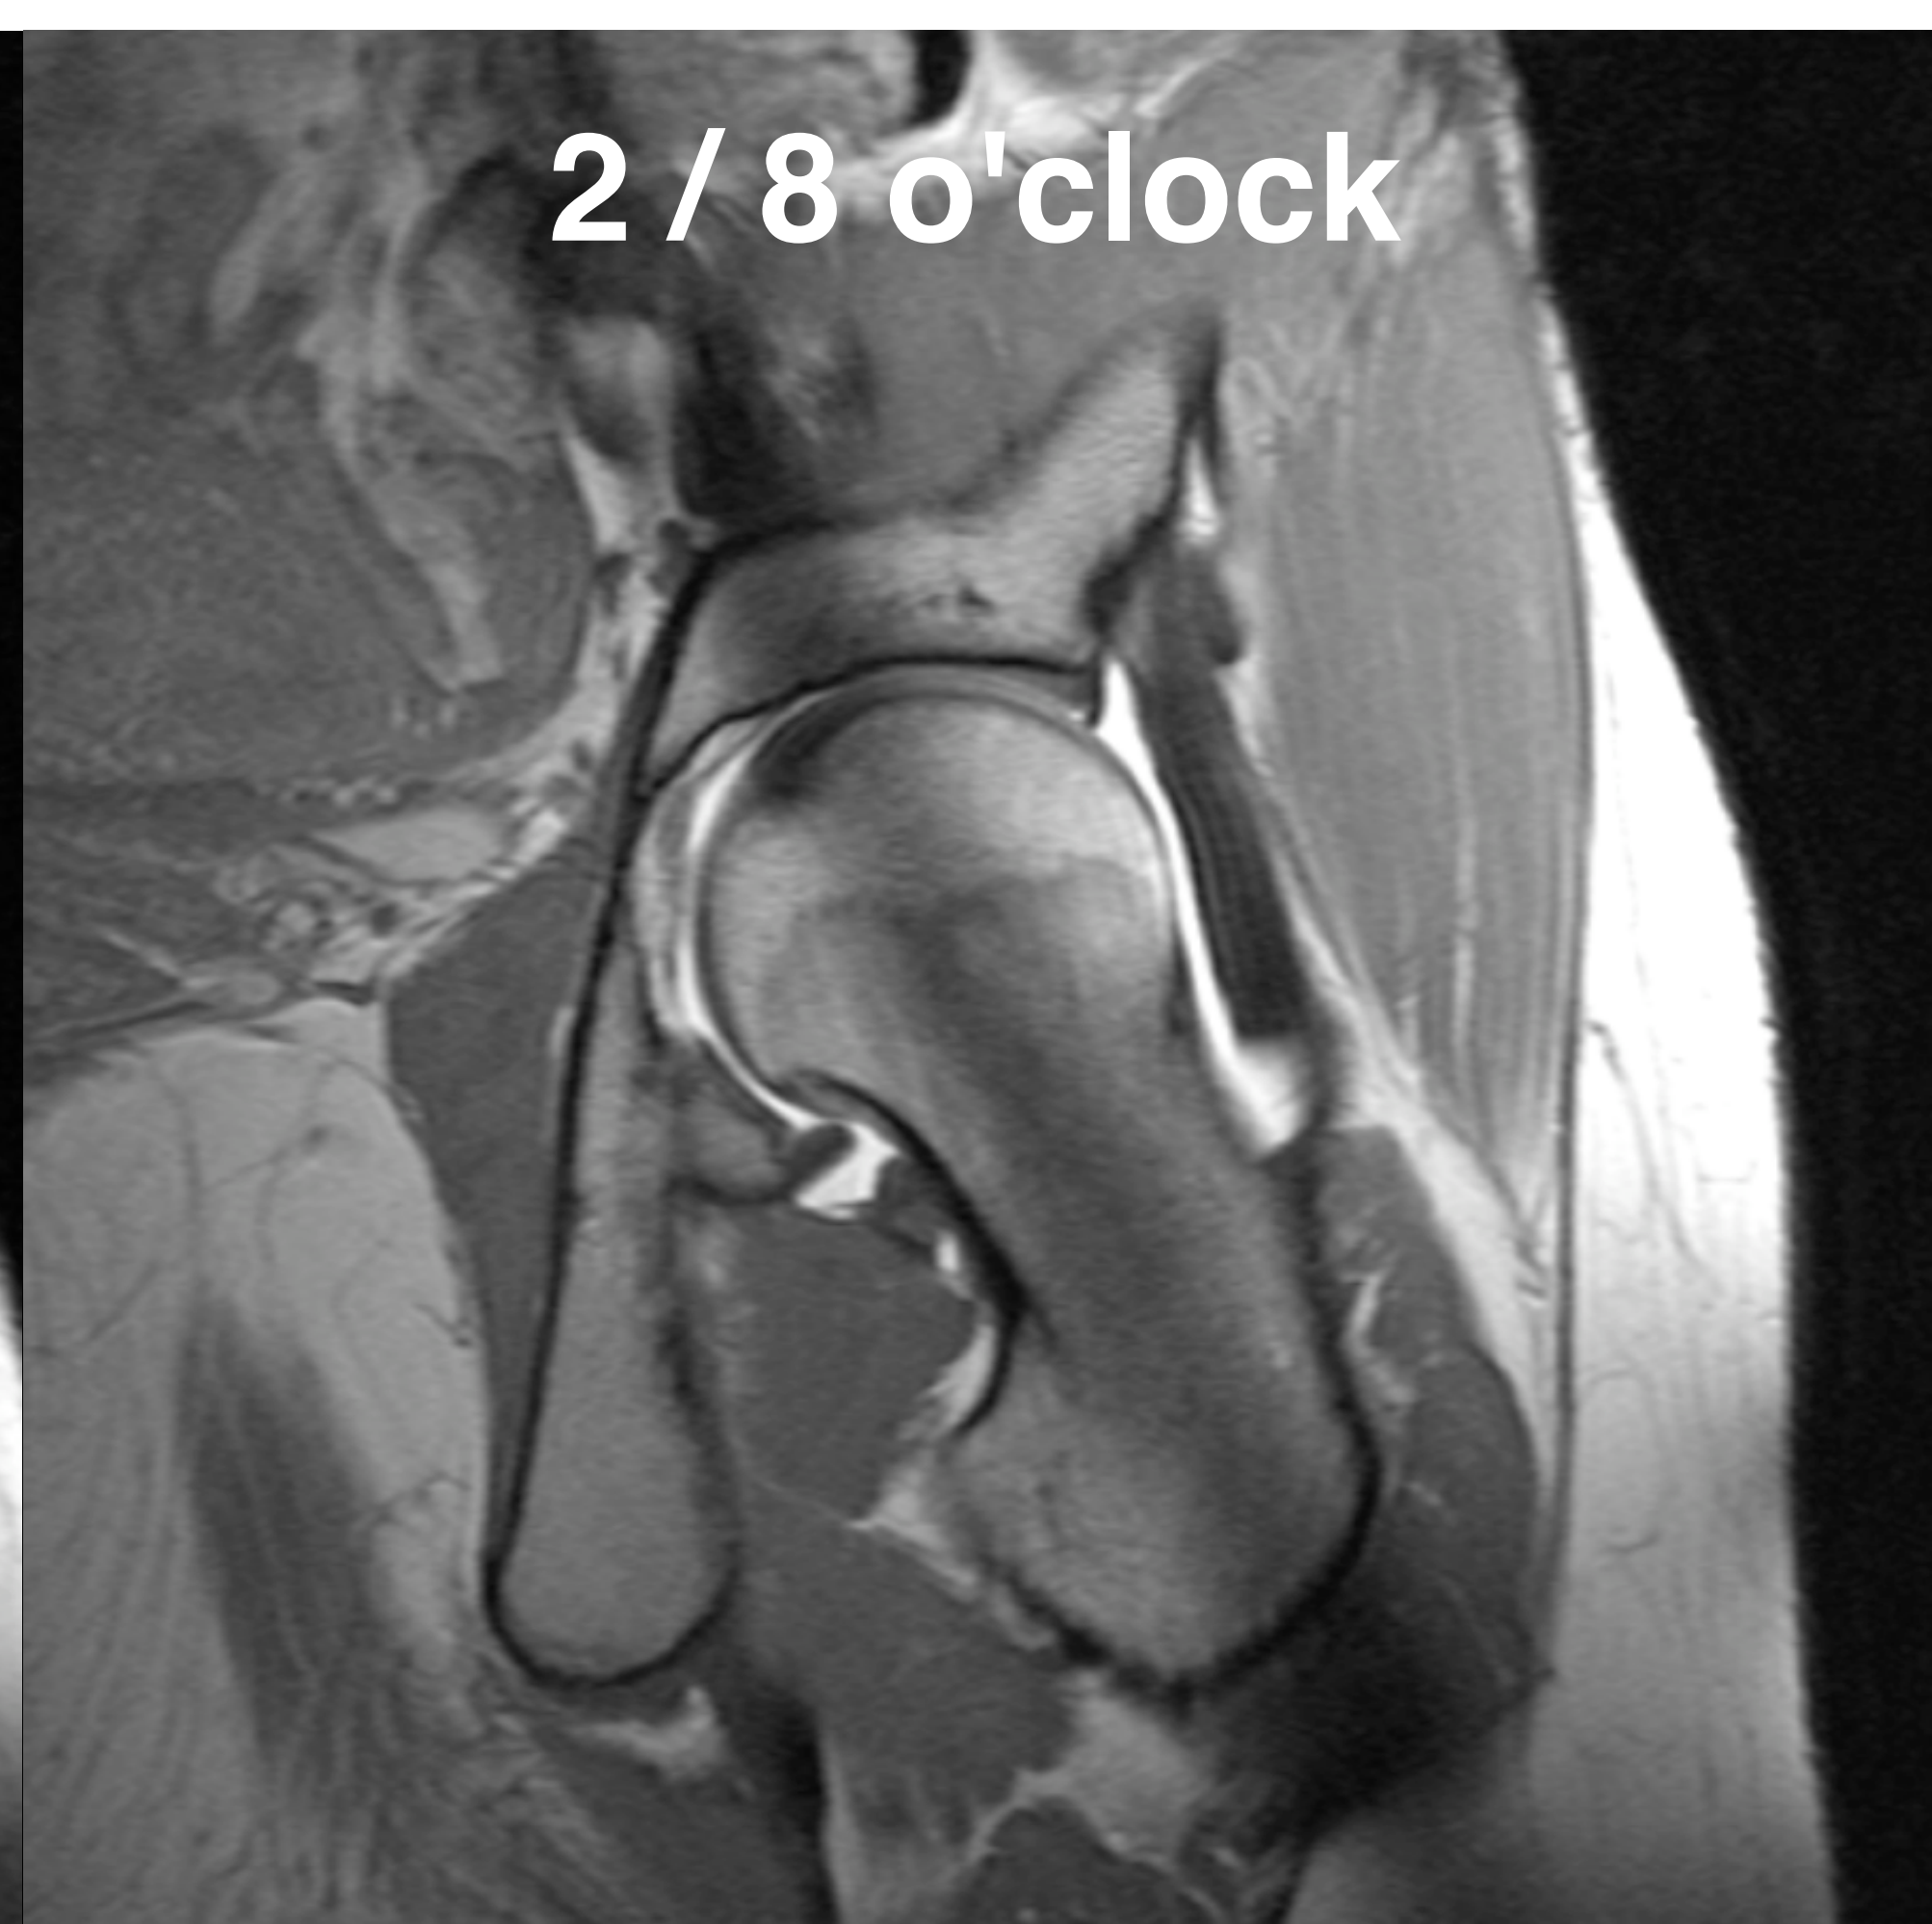

The arthro-MRI with intraarticular contrast agent is the gold-standard for imaging of chondrolabral structures of the hip joint. For orientation the clock system is used: 12 o'clock is defined as superior, 3 o'clock as anterior (for both left and right hips).

**6 / 12 o'clock**

**1 / 7 o'clock**

**2 / 8 o'clock**

**3 / 9 o'clock**

**4 / 10 o'clock**

**5 / 11 o'clock**
