

Program

Bernese Hip Symposium

February 11–13, 2010

Hosts

Klaus A. Siebenrock, Reinhold Ganz
and distinguished international faculty

Invitation

As it has been tradition for many years the hip joint continues to be a big focus in Orthopaedic Surgery at the University of Berne.

The upcoming symposium thus will cover a wide spectrum of hip joint pathologies and treatment regimes including for example developmental dysplasia and capital slip. Besides, femoro-acetabular impingement as a new pathomechanism for early osteoarthritis and treatment options including hip arthroscopy will cover a large field.

The intention of this symposium is to update our knowledge on hip disorders, to present new data and results and to focus on techniques for joint preserving surgery.

One section will be dedicated to critical analysis of current trends in orthopaedic surgery in terms of hip resurfacing arthroplasty.

I believe that the participation of distinguished international faculty members will contribute to an outstanding symposium.
